

Objective

Gather player feedback on Level 1 to evaluate helicopter controls, landing precision, difficulty balance, and overall fun factor before finalizing gameplay and polishing.

Playtest Procedure

Introduction (1 min):

Explain the basic controls (thrust, tilt, landing pad goal, and scoring idea).

Ask testers to focus on the “feel” of the helicopter and how natural or frustrating control feels.

Play Session (5–7 mins):

Each tester plays Level 1 from start to finish (or until they crash/land 3 times).

Observation Notes:

- Note where players struggle with control or physics.
- Watch if they understand what to do without verbal hints.
- Record moments of confusion or frustration.

Post-Play Questions (3–5 mins):

Ask the structured feedback questions below.

1. Did the helicopter feel responsive and intuitive to control?
2. Was it clear where to go and what your objective was?
3. Were the environment and obstacles challenging but achievable?
4. Did you enjoy playing the level overall?
5. Would you want to replay it to improve your score or landing?
